

SAAD SINAN

Flutter Developer

Damascus, Syria | +963 980 562 304 | saadsenanbusiness@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Flutter Developer with hands-on experience building cross-platform mobile UI using Dart, Clean Architecture, and Bloc/Cubit state management. Has designed feature-first Flutter architectures, custom design systems, and responsive, localized interfaces across several independent projects, with freelance experience integrating RESTful APIs using HTTP/Dio. Currently completing a Software Engineering degree while building and documenting personal Flutter projects on GitHub.

TECHNICAL SKILLS

Languages: Dart, JavaScript

Frameworks & Packages: Flutter SDK, flutter_bloc, flutter_screenutil, country_picker

State Management: BLoC, Cubit, Provider, Riverpod (basic)

Architecture: Clean Architecture, Feature-First Architecture, Repository Pattern, Use Cases

UI & Design: Material 3, Responsive UI, Custom Design Systems, Theming (Light/Dark), Localization (Arabic/English), Custom Animations

API & Data: RESTful API Integration, HTTP/Dio, JSON Parsing

Tools & Version Control: Git, GitHub, VS Code, Android Studio

Engineering Practices: OOP, SOLID Principles, Debugging, Problem Solving

EXPERIENCE

Flutter Frontend Developer — Freelance

01/2026 – Present | Damascus, Syria (Remote)

- Independently built Flutter applications end-to-end, from architecture setup through UI implementation, using Clean Architecture with Bloc/Cubit or Provider depending on project requirements.
- Integrated RESTful APIs using HTTP/Dio and parsed JSON responses to drive dynamic UI content.
- Built responsive, adaptive layouts and reusable UI components across multiple personal and freelance Flutter projects.

Frontend Web Developer — Freelance

01/2025 – Present | Damascus, Syria (Remote)

- Built responsive, component-based web interfaces using React.js, JavaScript, and Tailwind CSS.
- Applied consistent UI structure and code-organization practices across freelance and personal web projects.

PROJECTS

DamasCoffee — Coffee Ordering App | Flutter, Dart, flutter_bloc

Flutter coffee ordering app mid-migration from setState to a Bloc-driven architecture in the Home feature.

- Refactored the Home feature into data/domain/presentation layers using flutter_bloc, introducing use cases and a repository interface, while the rest of the app (auth, cart, checkout, profile) still runs on StatefulWidget/setState — a deliberate, incremental migration rather than a finished rewrite.
- Modeled loading/error/success UI states with a RequestStatus enum, replacing a single spinner with per-section skeleton placeholders that mirror the real layout.
- Built an interactive cart with live per-item and total recalculation, plus form-validated login and registration screens.

My Taxi — Ride-Hailing App Foundation | Flutter, Dart, flutter_bloc (Cubit)

Clean Architecture foundation for a ride-hailing app — authentication and design system implemented; ride-booking features not yet built.

- Set up a feature-first Clean Architecture structure (core/features split) with Cubit-driven authentication (login/sign-up) using immutable state classes.
- Built a tokenized design system (colors, spacing, typography) powering full light/dark Material 3 themes with locale-aware Arabic/English font switching.
- Implemented a custom animated navigation drawer with staggered AnimationController-based transitions.

My Doctor — Doctor Discovery App UI | Flutter, Dart, flutter_screenutil

Feature-first doctor discovery UI with a hand-built skeleton-loading system; authentication and booking are scaffolded, not functional.

- Built a custom shimmer/skeleton-loading system from scratch (AnimationController + ShaderMask) applied consistently across the splash, home, and details screens.
- Implemented responsive doctor discovery (specialty filters, favorites grid, top-doctors list) and a details screen with a collapsing SliverAppBar, scaled with flutter_screenutil.
- Added defensive route-argument handling in a centralized router to prevent crashes from malformed navigation calls.

Syrian Cart — E-Commerce UI | Flutter, Dart, Native Flutter Animations

Native Flutter e-commerce UI built without any third-party animation, routing, or state-management packages.

- Implemented every transition (splash sequence, animated bottom nav, page transitions) using Flutter's own AnimationController and TweenSequence APIs, with no animation package dependency.
- Built a typed custom router (onGenerateRoute) with typed route arguments and a fallback error route.
- Implemented product discovery, a details screen with a collapsing SliverAppBar, and a fully interactive cart with live total calculation.

EDUCATION

Bachelor's Degree in Software Engineering

01/2024 – Present

Arab International University (AIU), Damascus, Syria — Focus: Flutter & full-stack application development

LANGUAGES

Arabic — Native | English — Intermediate (Reading & Writing)
