SUMMARY

Junior Flutter developer building cross-platform applications for Android, web and desktop with Dart, BLoC, Cubit and Riverpod on feature-first Clean Architecture. Strongest project is Mashwarak, a two-sided ride-hailing app covering both rider and driver flows, with live map tracking, OTP authentication, real-time trip updates and an in-app wallet, backed by 1,293 automated tests. Integrates Supabase and PostgreSQL for authentication, real-time data and Row-Level Security, and builds responsive React interfaces with Tailwind CSS. Software Engineering student at Arab International University, available for part-time remote work.

TECHNICAL SKILLS

Mobile & Frontend: Flutter, Dart, BLoC, Cubit, Riverpod, state management, responsive and adaptive UI, Material 3, localization (Arabic and English, RTL)

Architecture: Clean Architecture (feature-first), repository pattern, use cases, dependency injection (get_it), navigation (go_router)

APIs & Integration: REST API integration, JSON parsing, Google Maps SDK, Google Routes API, Firebase Cloud Messaging, Kotlin (native Android integration)

Backend & Data: Supabase (authentication, database, realtime, storage), PostgreSQL, PostGIS, SQL functions, database migrations, Row-Level Security (RLS) policies, Deno Edge Functions, local persistence (Hive)

Testing & Tools: Unit, widget and integration testing (flutter_test), static analysis, Git and GitHub, Android Studio

Web: React.js, JavaScript, Tailwind CSS, Vite, responsive web design

PROJECTS

Mashwarak — Arabic-First Ride-Hailing App | Independent project

Flutter, Dart, BLoC, Supabase, PostgreSQL, Google Maps, Firebase Cloud Messaging, Kotlin

- Built rider and driver as two complete applications inside one Flutter binary across 14 features, using feature-first Clean Architecture with BLoC state management, repository interfaces, use cases and get_it dependency injection.
- Implemented the full mobile UI: live map screens, booking and trip-tracking flows, driver dashboard, wallet and trip history, with skeleton loading states, light and dark themes, and a custom responsive layer that scales layout and typography across phone and tablet sizes.
- Built phone and OTP authentication, live trip tracking over Supabase Realtime, driver location updates, route drawing with the Google Routes API, and push notifications through Firebase Cloud Messaging.
- Made the app Arabic-first with full RTL support, 702 localized messages per language enforced at build time, and locale-aware dates, plurals and currency formatting.
- Integrated the app with Supabase and PostgreSQL for authentication, data access and real-time updates, writing SQL functions so that fare pricing and trip status changes are decided on the server rather than in the app.
- Wrote 1,293 passing unit and widget tests across 66 files, including a regression matrix across device sizes, with zero Flutter analyzer issues.

Repository: github.com/SaadSinan-dev/Mashwarak-Taxi **Demo:** mashwarak.netlify.app

Dareb — Educational Mobile Application

Flutter, Dart, BLoC/Cubit, Dio

- Built a Flutter learning app using feature-first Clean Architecture and BLoC/Cubit; integrated REST APIs via Dio for courses, lessons and assessments, plus phone/OTP authentication with secure token persistence.
- Implemented reusable, adaptive Arabic RTL/English LTR screens; debugged API/session flows and added unit, widget and integration tests for authentication, validation and responsive behavior.

Code: github.com/SaadSinan-dev/Dareb-Educational-Mobile-App **Live:** darb-mobile.netlify.app

Kario Task App | Independent project

Flutter, Dart, Riverpod, go_router, Hive, shared_preferences

- Built a cross-platform task manager with list, board, calendar and timeline views for Android, web, Windows, macOS and Linux.
- Structured the app in layers with dependency inversion, keeping domain logic in pure Dart behind 11 repository interfaces.

Repository: github.com/SaadSinan-dev/Kario-TaskApp **Demo:** kario-taskapp.netlify.app

EXPERIENCE

Independent Flutter Developer | Jan 2026 – Present | Damascus, Syria | Remote

- Built cross-platform Flutter apps on feature-first Clean Architecture with BLoC, Cubit, Riverpod and get_it dependency injection.
- Integrated Supabase authentication, PostgreSQL, Realtime and push notifications, plus the Google Routes API over HttpClient.
- Wrote unit, widget and responsive regression tests; built Android APKs and deployed Flutter web demos.

Independent Frontend Web Developer | Jan 2025 – Present | Damascus, Syria | Remote

- Built and deployed a bilingual English/Arabic React portfolio with RTL-aware layouts and reusable Tailwind components.

EDUCATION

B.Sc. Software Engineering — Arab International University (AIU) | 2024 – Present | Damascus, Syria

LANGUAGES

Arabic — Native | English — Intermediate
